III. Further guidance from STAP

1. The project aims to reduce GHG emissions from energy consumption by achieving market transformation towards high efficiency appliances through introduction of energy labels and minimum energy performance standards.
2. The focus of the project is to overcome the barriers to promote energy efficiency. It would be desirable to identify and rank the barriers from the perspective of different stakeholders using standard methods.
3. STAP recommends identifying and prioritizing the appliances for energy efficiency improvements based on the projections of GHG emissions or energy consumption.
